

## M2M Group assists Moroccan Ministry of Transport to fully implement its strategy of transforming and modernizing driver's license and vehicle registration documents.

**Casablanca – February 19, 2010** – On the occasion of the National day of road safety in Morocco, which takes place within a context marked by the **adoption of a new road traffic code**, **M2M Group** is delighted to support the Moroccan Ministry of Transport in deploying the next phase of its modernizing strategy, based on the electronic driver's license and vehicle registration cards program.

The entry into force of the new road traffic code, due for 1st October 2010, will kick off the generalized replacement of paper-based documents by secure e-documents.

In addition to **road safety prevention measures that will leverage applications such as « Point-record driving license» and vehicle control history**, Moroccan Ministry of Transport aims to use e-driver's license and vehicle registration cards to provide citizens with a set of services that touch multiple facets of their daily lives. **Morocco's e-driver's licenses and vehicle registration cards would gather future applications for public transportation, motorways tolls, insurance and tax payments, etc.**

« This program will place Morocco as the world's reference for total intermodality. Moroccan citizens will be able to use their electronic documents to gain access to a large range of services that leverage innovative and secure applications in the fields of transport, e-payment and customer loyalty» said Rachid HANANE, Director of egov solutions at M2M Group.

This program was launched on February 2007. It concerns the issuance of more than 13 million smart contactless cards over a period of six years. Roll-out started in august 2007 and is to be achieved by 2013.
